

CRITICALSTART®

The Next Evolution of MDR, Delivered Today

Powerful insights, data, and risk lifecycle management with Managed Cyber Risk Reduction

You've invested in cybersecurity tools, implemented strategies, and enacted processes. But how do you know that your current investments will pay off in a continually evolving threat landscape? To achieve the greatest cyber risk reduction per dollar invested, you must have a combination of reactive and proactive controls operating at peak performance. And that's exactly what you achieve with Critical Start's Managed Detection and Response (MDR) and risk reduction tools built on the industry's first **Managed Cyber Risk Reduction (MCRR)** solution.

We seamlessly integrate with, augment, and elevate your security tools to give you a deeper understanding of and control over your cyber risks. With the solutions and services built into our Cyber Operations Risk & Response (CORR) platform, you can clearly measure, articulate, and improve security maturity while responding faster to active threats.

Solve Your Most Challenging Cybersecurity Issues

Eliminate Alert Fatigue

With a **Trusted Behavior Registry® (TBR™)** that automatically removes false positives and only escalates true positives for further investigation and response.

Trust Your Security Coverage

With **Asset Visibility** to ensure your Security Operations Center (SOC) is receiving all expected signals, and that all your assets have the right security controls in place.

Respond Before Impact

With a Risk and Security Operations Center (RSOC) operating on **10-minute notification SLAs**, and a **MOBILESOC®** application that gives you swift triage and incident containment on the go.

Determine the Best Security Action to Take Next

With **MITRE ATT&CK Mitigations** that help you respond to active events, and **Risk-Ranked Recommendations** that give you prescriptive steps to continually fortify your defenses.

Measure and Articulate Security Maturity

With framework-aligned, **peer benchmarked Risk Assessments**, which offer current and historical trend analysis, enabling you to track and manage security improvements over time.

Simplify Monitoring and Communications

With a **Cyber Risk Dashboard** that gives you a unified view of log failures, control gaps, critical systems, MDR threat evaluation, and cyber risk reporting all in one place.

Get Ahead of Vulnerabilities

With a turnkey, multi-tiered **Vulnerability Management Service** that provides best-in-class tools, custom scan configurations, prescriptive patch recommendations, compliance coverage, and more.

Prioritize Vulnerabilities to Reduce Risk

With **Vulnerability Prioritization** that contextualizes Cyber Vulnerabilities and Exposures (CVEs) by leveraging deep analysis of threat group exploitation, cross-vector threat intelligence, and asset criticality.

Monitor Critical Operational Technology Assets

With dedicated Operational Technology (OT) threat detection and **24x7x365 monitoring** that doesn't require a SIEM.

A Revolutionary Approach: Managed Cyber Risk Reduction

In response to the rapidly evolving cyber risk landscape, we reimagined how MDR fits into a more robust risk management strategy. The result is **Managed Cyber Risk Reduction (MCRR)**.

With industry standard frameworks underpinning our solutions and services, you gain superior cyber risk lifecycle management, from identifying and protecting assets, across detection and response, and into recovery after an incident. We also help you govern your security strategy with customizable dashboards and reporting that provide the real-time metrics that matter to each key stakeholder.

The MCRR platform is the link between your environment and the deep insights you need to make data-informed, strategic decisions. With posture monitoring and management, rapid analytics and response actions, and our expert RSOC team, you'll have what you need to build resilient proactive defenses while responding to alerts before they become costly incidents.

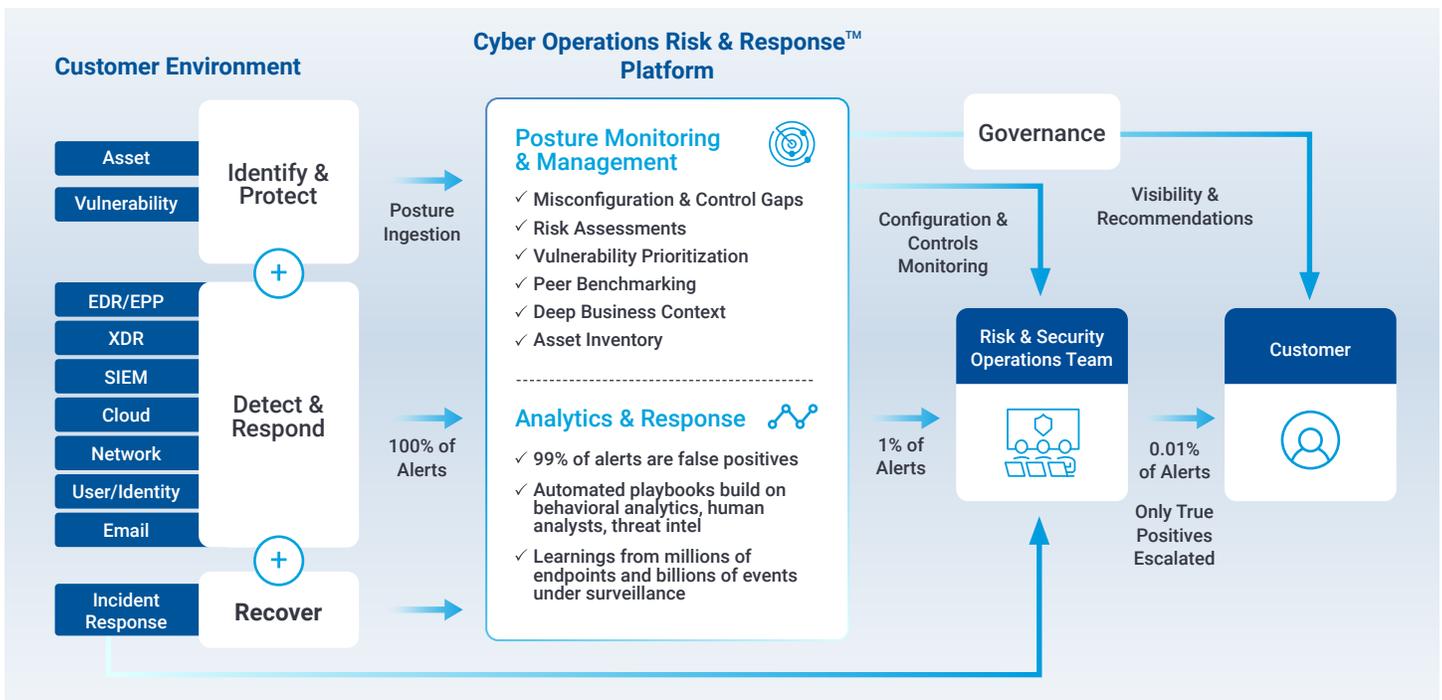

Get More from Your Security Stack

We directly integrate with, fortify, and monitor hundreds of technologies that are crucial to your business and security operations, including endpoint monitoring tools, SIEM tools, user and identity platforms, notification and ticketing systems, and a wide array of technologies for managed XDR/SIEM. Some available integrations* include:
