

CRITICALSTART® MOBILESOC®

Alert analysis, threat containment, and team communication from anywhere.

KEY BENEFITS

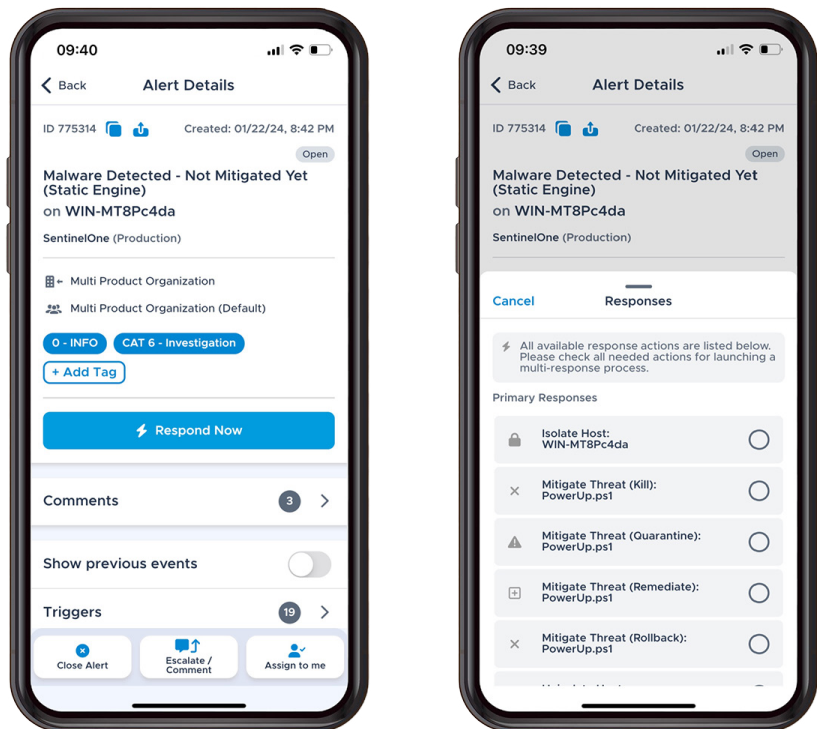

- ✓ **Maintain full situational awareness** and quickly assess the alerts requiring your attention.
- ✓ **Reduce the risk of a breach** by taking decisive action to shut down attacks as they're happening.
- ✓ **Coordinate investigations and response actions** with direct SOC communication built into the app.
- ✓ **See complete alert details** as if you were sitting at your desk.
- ✓ **Access security posture metrics** while on the go.
- ✓ **Stay aware of the latest threats** with continuously updated bulletins from our Cyber Threat Intelligence (CTI) team.

Security issues don't happen on a schedule, and when attackers strike, every second counts. Any time you're away from your desk, attackers gain valuable time to infiltrate, move, and disappear into your network.

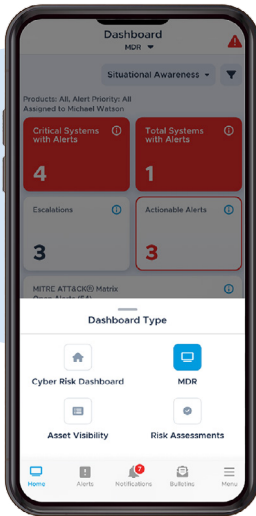

Critical Start MOBILESOC® puts you back in control, no matter where you are. This full-featured mobile app gives you real-time monitoring, remote containment, and enhanced security protection directly from your iOS or Android device.

How it works

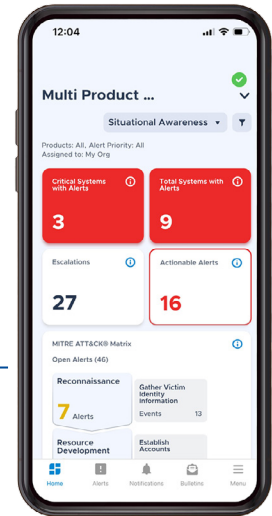

The MobileSOC app is a natural extension of the Critical Start Cyber Operations Risk & Response™ (CORR) platform. You see everything our Security Operations Center (SOC) analysts see, and you can coordinate responses directly from your mobile device, just like if you were at your desk. You'll see full alert details, timelines of all actions taken, and available response actions. You'll be able to scan, quarantine, or block affected hosts and cloud assets, conduct antivirus scans, disable compromised user accounts, force password resets, quarantine emails, and more. Additionally, the MobileSOC app gives you rapid communication directly with the Critical Start SOC team so you can orchestrate further investigation or request response actions to be taken on your behalf.

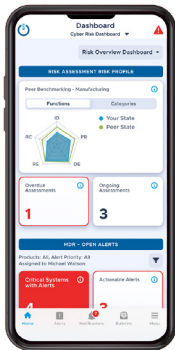

Key Features and Functionality

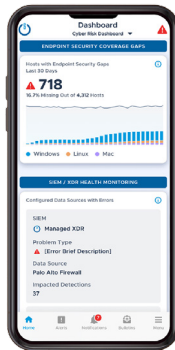

Review and address multiple aspects of your security program through a selection of integrated dashboards, services, and modules

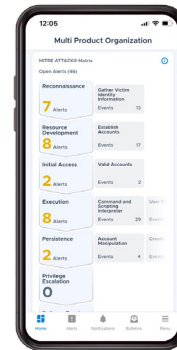

Quickly assess the number and priority level of alerts requiring your attention with the intuitive **Situational Awareness** dashboard of the MDR home screen

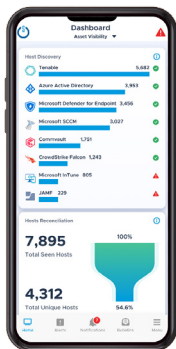

Use the **Cyber Risk Dashboard** to see a unified view of your overall cyber risk, including urgent items and next steps to complete for the most significant risk reduction

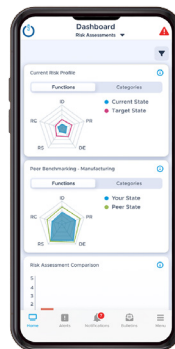

Monitor security tool coverage, including endpoint and vulnerability scanner coverage gaps and SIEM log ingestion health to ensure the SOC is receiving all expected threat telemetry

Understand detections mapped to the **MITRE ATT&CK® Framework** and see response actions taken to contain and mitigate threats

Understand how many assets you have and if they are all protected with the **Asset Visibility Dashboard**

Get ongoing visibility into key metrics and risk status calculated from completed assessments and evaluate your security posture against peers in the same industry with the **Risk Assessments Dashboard** (licensed users only)

Get Started Today

Don't give attackers the upper hand. Schedule a personalized demo to see how Critical Start MobileSOC helps you contain threats and communicate effectively from anywhere.
